

## COMMUNICATIONS TECHNICIAN

We are [Minburn Communications](#), a well-established communications (internet, video, voice) provider serving Woodward (home office), Bouton, Dallas Center, Minburn, and Perry - just a half-hour NW of Des Moines. We're striving to be the most technologically progressive and customer-centric communications/broadband provider in rural Iowa. We are seeking a technician to bring customers face-to-face with the latest communications technology delivered by state-of-art fiber optics.

You will install, operate, maintain, test, and repair voice and data telecommunications equipment with a primary focus on fixed wireless equipment to ensure that it functions properly and conforms to specifications and most importantly, to customer expectations.

We are looking for an excellent problem solver with a "willing to roll up your sleeves to tackle any technical issue thrown your way" mindset. Daily, you will use electronic test and repair equipment for telecommunications equipment and systems while providing nothing short of exceptional service to our customers.

Some of the things you should know: Expertise in the delivery and management of fixed wireless (RADWIN, Ubiquiti), digital switching (Genband C15), LAN/WAN, fiber networks (we are gig capable), Calix, Brocade, GPON/AE, CLI programming, Cisco, IP & SS7 networks, Fujitsu, IP video and VOIP, etc.

A valid driver's license, willingness to learn and grow, and a penchant to serve our communities is a must. If a challenging technical position with customer contact intrigues you send your resume to:
